## YOUR CURRENT FOUNDATION

RAW STRENGTH BASELINE – ALL LIFTS WITHOUT BELT OR SUPPORT

### INCLINE BENCH PRESS

|                |                |
|----------------|----------------|
| Current Max    | 100kg × 5 reps |
| Estimated 1RM  | ~115kg         |
| 12-Week Target | 120kg × 5      |

### DEADLIFT (SUMO/CONV)

|                |                |
|----------------|----------------|
| Current Max    | 175kg × 8 reps |
| Estimated 1RM  | ~220kg         |
| 12-Week Target | 200kg × 5 raw  |

### BACK SQUAT

|                |                |
|----------------|----------------|
| Current Max    | 175kg × 8 reps |
| Estimated 1RM  | ~220kg         |
| 12-Week Target | 200kg × 5 raw  |

**Assessment:** You are an advanced raw lifter. 175kg×8 on squat and deadlift without support is elite-intermediate. This plan builds the ATHLETE around your strength — stamina, mobility, flexibility, and power-endurance are the new frontiers.

 Squat:BW = **2.1×**

 Deadlift:BW = **2.1×**

 Bench:BW = **1.2×**

 Total:BW = **5.4×**

100kg × 5 → **120kg × 5** | 175kg × 8 → **200kg × 5** | 0 split → **Full Front Split**

# HYBRID METHODOLOGY — 5 SYSTEMS FUSED

EACH SYSTEM TARGETS A SPECIFIC ATHLETIC QUALITY

## RONNIE COLEMAN VOLUME

"Lightweight baby!" Heavy compounds for HIGH REPS (8-12+). Not just singles. 5×10 squats at 130kg with 90s rest builds more stamina than any cardio. Volume = work capacity = stamina under load.

## JUJIMUFU FLEXIBILITY

Strength + splits = real athleticism. Loaded pancakes, PNF-loaded front splits, Jefferson curls. Stretch AFTER heavy training when muscles are hot. Load makes flexibility permanent.

## IDO PORTAL MOVEMENT

"Move or die." Daily hanging (7 min), squat sits (5 min), locomotion flows. Movement quality as the foundation of all athletic expression. Ground-based preparation.

## FRANK MEDRANO CALISTHENICS

Bodyweight mastery at any size. Weighted muscle-ups, front levers, human flags — integrated INTO heavy training. Strength expressed through bodyweight control.

## DDP YOGA RECOVERY

"Ain't your mama's yoga." Dynamic tension stretching — flex all muscles WHILE in stretch positions. Active recovery that builds real flexibility. Rehabilitated wheelchair-bound athletes.

## BEN PATRICK KOT

Bulletproof joints for 175kg+ loads. ATG Split Squats, Tibialis work, Nordic Curls. Loaded heavier to match your strength. Joint prep is non-negotiable at this weight class.

**The Hybrid Principle:** Every session blends 2+ systems. Coleman squats finish with Jujimufu loaded stretches. Ido hangs open every session. DDP flows close every session. You never do "just strength" or "just mobility."

# WEEKLY ARCHITECTURE

EVERY DAY IS HYBRID – STRENGTH MEETS FLEXIBILITY MEETS STAMINA

| MON                                                                   | TUE                                                              | WED                                                               | THU                                                                | FRI                                                          | SAT                                                        | SUN                                                                                                 |
|-----------------------------------------------------------------------|------------------------------------------------------------------|-------------------------------------------------------------------|--------------------------------------------------------------------|--------------------------------------------------------------|------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|
| Coleman<br>Upper Volume<br>+ Medrano<br>Calisthenics +<br>Ido Hanging | Coleman<br>Lower Volume<br>+ Jujimufu<br>Loaded<br>Stretch + KOT | Ido Portal<br>Movement +<br>Full KOT +<br>Stamina<br>Conditioning | Medrano<br>Weighted<br>Calisthenics +<br>Hypertrophy +<br>DDP Flow | Heavy Lower<br>Strength +<br>Nordics +<br>Jujimufu<br>Splits | Sprint Power +<br>Plyometrics +<br>Conditioning<br>Complex | RECOVERY<br>DAY – Option<br>A: DDP Yoga +<br>Mobility OR<br>Option B:<br>FULL REST<br>(No Training) |

**Daily Non-Negotiables (Every Session):** Ido Portal Dead Hang 7 min total · Squat Sit 5 min · Wrist warm-up 2 min. These run EVERY DAY regardless of the session type.

WEEKS 1 – 4

## ATHLETIC RECONSTRUCTION

Build work capacity with Coleman volume. Introduce Jujimufu flexibility. Establish Ido Portal movement baselines. Focus: stamina-under-load and mobility expansion.

- COLEMAN 5×8–10
- JUJIMUFU LOADED STRETCH
- IDO PORTAL HANGING
- KOT FOUNDATION

LOAD PARAMETERS

|                        |                        |                    |
|------------------------|------------------------|--------------------|
| Compounds(%1RM)        | <div><div></div></div> | 70-78% (volume)    |
| Calisthenics           | <div><div></div></div> | BW + 10-20kg       |
| Loaded Stretches       | <div><div></div></div> | Light (form focus) |
| Rest Between Compounds | <div><div></div></div> | 90s ONLY (stamina) |

PHASE 1 RULES

|                                       |                   |
|---------------------------------------|-------------------|
| All compounds: 8-10 rep range         | Volume focus      |
| Rest: 90-120s max                     | Builds stamina    |
| Every session opens with Ido hangs    | 7 min             |
| Every session closes with DDP/stretch | 10 min            |
| Juji stretch: after lower days only   | Tue + Fri         |
| Week 4 = Deload                       | 50% vol, 60% load |

## ▸ IDO PORTAL OPENING (10 MIN)

|                                 |         |                                                      |
|---------------------------------|---------|------------------------------------------------------|
| Dead Hang (passive)             | 3 × 60s | Full shoulder extension. Gravity decompresses spine. |
| Active Hang (scapular pull-ups) | 2 × 15  | Engage lats without bending elbows.                  |
| Squat Sit Hold                  | 3 min   | Deep squat, heels down. Shift weight side to side.   |
| Wrist Circles + Loading         | 2 min   | Prep for calisthenics load bearing.                  |

## ▸ COLEMAN VOLUME — UPPER PRESS (90S REST ONLY)

| EXERCISE              | SETS × REPS | LOAD      | NOTES                                                                                         |
|-----------------------|-------------|-----------|-----------------------------------------------------------------------------------------------|
| Incline Barbell Press | 5 × 8       | 75–80kg   | Coleman principle: HEAVY for HIGH REPS. 90s rest forces cardiovascular adaptation under load. |
| Flat DB Press         | 4 × 10      | 36kg DBs  | Deep stretch at bottom. Full ROM. 90s rest.                                                   |
| Weighted Pull-up      | 5 × 8       | BW + 20kg | "Ain't nothin' but a peanut." Volume pull-ups build stamina.                                  |
| Barbell Row (Pendlay) | 4 × 10      | 100kg     | Dead-stop each rep. Explosive pull. 90s rest.                                                 |

## ▸ MEDRANO WEIGHTED CALISTHENICS

| EXERCISE                | SETS × REPS | NOTES                                                                   |
|-------------------------|-------------|-------------------------------------------------------------------------|
| Weighted Dips (+20kg)   | 4 × 10      | 3s negative, explode up. Full ROM — chest below hands.                  |
| Muscle-Up (or Negative) | 4 × 3–5     | Strict bar. If not achievable: explosive pull-up + negative transition. |
| Archer Push-ups         | 3 × 8/side  | Gateway to one-arm push-up. Full extension on assist arm.               |
| Typewriter Pull-ups     | 3 × 5/side  | Pull to one side, traverse, lower. Asymmetric pulling strength.         |

## ▸ IDO PORTAL CLOSING — SHOULDER FLEXIBILITY

|                   |         |                                                    |
|-------------------|---------|----------------------------------------------------|
| German Hang       | 3 × 20s | Behind-body shoulder extension stretch under load. |
| Skin the Cat      | 3 × 5   | Full controlled rotation. 3s at each end position. |
| Dead Hang (final) | 2 × 45s | Decompression to finish.                           |

## ► KOT WARM-UP (STEPS 1–5)

Tibialis Raise → FHL Calf → KOT Calf → Patrick Step → ATG Split Squat      12 min      25 reps each. ATG: 5×5 per side bodyweight. Non-negotiable before heavy lower.

## ► COLEMAN LOWER VOLUME (STAMINA UNDER LOAD)

| EXERCISE            | SETS × REPS | LOAD      | NOTES                                                                                                                   |
|---------------------|-------------|-----------|-------------------------------------------------------------------------------------------------------------------------|
| Back Squat          | 5 × 10      | 130–140kg | Coleman did 315lbs for 20+ reps. This is YOUR version. 90s rest ONLY. Lungs will burn. Legs will scream. Stamina GROWS. |
| Romanian Deadlift   | 4 × 10      | 120kg     | Full stretch at bottom. Build hamstring endurance for your heavy pulls.                                                 |
| Walking Lunges (DB) | 4 × 12/leg  | 30kg DBs  | No rest between legs. Cardiovascular + leg volume combined.                                                             |
| Leg Press           | 3 × 20      | Heavy     | Last 5 reps: 3s pause at bottom. Stamina + stretch under load.                                                          |

**Why 5×10 at 130kg?** You squat 175×8. At 75% for 5×10 with 90s rest, you create massive cardiovascular adaptation under load. After 4 weeks, your 175×8 will feel like your old 5-rep set.

## ► JUJIMUFU LOADED STRETCHING (MUSCLES ARE HOT — PERFECT TIMING)

| STRETCH                     | PROTOCOL                            | NOTES                                                                                |
|-----------------------------|-------------------------------------|--------------------------------------------------------------------------------------|
| Loaded Pancake (BB on back) | 3 × 45s                             | 20–40kg barbell across upper back. Legs wide, lean forward. Load forces hip opening. |
| Jefferson Curl (Loaded)     | 3 × 8 slow reps                     | 20kg, stand on platform. Roll down vertebra by vertebra. 5s down, 5s up.             |
| Front Split — PNF           | 3 × (10s contract + 30s relax)/side | In split: push heel into ground 10s → release, sink deeper 30s. Jujimufu's method.   |
| Cossack Squat (Loaded)      | 3 × 8/side                          | 15kg KB at chest. Full depth. Adductor flexibility + strength.                       |
| Elevated Pigeon             | 60s/side                            | Front leg on bench. Lean forward. Deep hip external rotation.                        |

**Juji Principle:** Muscles are warmest post-heavy training. Blood is pumped into fascia. Neural inhibition at lowest. This is when you make REAL flexibility gains.

## ► IDO PORTAL MOVEMENT FLOW (20 MIN)

|                              |             |                                                                                 |
|------------------------------|-------------|---------------------------------------------------------------------------------|
| Bear Crawl Variations        | 4 × 20m     | Forward, backward, lateral. Low hips.                                           |
| Lizard Crawl                 | 4 × 15m     | Chest touches ground each step. Hip rotation.                                   |
| QDR Freestyle                | 3 × 30s     | Combine bear, crab, monkey. Explore ranges.                                     |
| <b>Squat Routine (30/30)</b> | 10 min      | 30s deep squat → 30s standing. Accumulate 5 min in squat. Shift, rotate, reach. |
| Hanging Challenge            | 7 min total | Passive, active, single-arm, traversal. Min 30s per hang.                       |

## ► FULL KOT PROTOCOL (ALL 8 STEPS)

|                                                 |                                                  |                                                         |                                                 |
|-------------------------------------------------|--------------------------------------------------|---------------------------------------------------------|-------------------------------------------------|
| <b>1</b><br>Tibialis Raise<br>25 reps · 2s hold | <b>2</b><br>FHL Calf Raise<br>25 reps · big toe  | <b>3</b><br>KOT Calf Raise<br>25 each · knees over toes | <b>4</b><br>Patrick Step<br>25 each · pain-free |
| <b>5</b><br>ATG Split Squat<br>5×5 per side     | <b>6</b><br>Elephant Walk<br>30 reps · hamstring | <b>7</b><br>L-Sit<br>60s total                          | <b>8</b><br>Couch Stretch<br>60s per side       |

## ► CORE DESTRUCTION BLOCK — WEDNESDAY (10 MIN)

| EXERCISE                                  | SETS × REPS | NOTES                                                               |
|-------------------------------------------|-------------|---------------------------------------------------------------------|
| <b>Hanging Leg Raises (toes to bar)</b>   | 4 × 12      | Full ROM. No swing. Progress: weighted ankles by Phase 2.           |
| Ab Wheel Rollout (standing)               | 3 × 8–10    | Full extension. 2s hold at bottom. Kneeling if needed Wk 1–2.       |
| <b>Pallof Press (Cable Anti-Rotation)</b> | 3 × 12/side | Anti-rotation = functional core. Resist the pull. 3s hold extended. |
| Hollow Body Hold                          | 3 × 30s     | Gymnast standard. Lower back GLUED to floor. Arms overhead.         |

**Why here, not separate?** Core work placed AFTER movement flow and BEFORE conditioning. Pre-fatigued core during conditioning = real-world stamina. Your 175kg squat already demands massive core bracing — this adds the aesthetic/endurance component.

BLOCK A: EMOM 10 MIN (ODD WKS)

|                            |           |
|----------------------------|-----------|
| Min 1: KB Swings × 15      | 32kg      |
| Min 2: Burpee Pull-ups × 8 | Explosive |
| Min 3: Battle Ropes × 30s  | Max       |
| Min 4: Box Jump × 10       | 24"       |
| Min 5: Thrusters × 10      | 40kg      |

BLOCK B: TABATA (EVEN WKS)

|                                |            |
|--------------------------------|------------|
| Assault Bike: 20s ON / 10s OFF | ×8 = 4 min |
| Rest 2 min                     | —          |
| KB Snatch: 20s ON / 10s OFF    | ×8 = 4 min |
| Rest 2 min                     | —          |
| Burpees: 20s ON / 10s OFF      | ×8 = 4 min |

► MEDRANO CALISTHENICS SKILLS

| Skill                          | Sets × Duration | Notes                                                |
|--------------------------------|-----------------|------------------------------------------------------|
| Front Lever (Tuck → Adv. Tuck) | 5 × 10-15s      | Straight arms, hips level. Progress weekly.          |
| Muscle-Up to L-Sit             | 4 × 3-5         | Full MU → hold L-sit at top. Medrano signature.      |
| Handstand Push-up (wall)       | 4 × 5-8         | Full ROM. Head to floor. Progress to deficit.        |
| Dragon Flag                    | 4 × 6-8         | Full body lever. 3s eccentric. Core for front lever. |
| One-Arm Push-up Progression    | 3 × 5/side      | Wk 1-2: elevated. Wk 3-4: floor level.               |

► HYPERTROPHY ACCESSORIES (COLEMAN VOLUME)

|                           |        |                                       |
|---------------------------|--------|---------------------------------------|
| DB Lateral Raises         | 4 × 15 | No swing. 60s rest. Cannonball delts. |
| Face Pulls                | 4 × 15 | External rotation. Rear delt health.  |
| Incline DB Curl           | 3 × 12 | Full stretch. Peak squeeze.           |
| Overhead Tricep Extension | 3 × 15 | Deep stretch. Constant tension.       |

► DDP YOGA CLOSING FLOW (10 MIN)

|                                |                |                                                                                                                             |
|--------------------------------|----------------|-----------------------------------------------------------------------------------------------------------------------------|
| Diamond Cutter Series          | 3 rounds       | Warrior 1→2→Reverse→Side Angle→Triangle. 15s each. DYNAMIC TENSION: flex all muscles while stretching. DDP's secret weapon. |
| Standing Bow                   | 30s/side       | Quad + balance + hamstring. DDP balance builder.                                                                            |
| Push-up → Cobra → Downward Dog | 5 reps + holds | Spinal + hamstring + shoulder flexibility in one flow.                                                                      |
| 4-7-8 Breathing (corpse pose)  | 2 min          | Parasympathetic reset. 4-count in, 7 hold, 8 out.                                                                           |

**DDP Principle:** Dynamic tension = flexing muscles while in stretch positions. Creates isometric strength WITHIN flexibility. Rehabbed NFL players back from wheelchairs. You use it for recovery + athletic flexibility.

## ► KOT WARM-UP + IDO SQUAT SIT

|                |        |                                                  |
|----------------|--------|--------------------------------------------------|
| KOT Steps 1-5  | 12 min | Full sequence as programmed.                     |
| Deep Squat Sit | 3 min  | Rock side to side. Knees out. Prime ankles/hips. |

## ► STRENGTH BLOCK (HEAVIER, FEWER REPS THAN TUESDAY)

| EXERCISE                | SETS × REPS | LOAD      | NOTES                                                                                 |
|-------------------------|-------------|-----------|---------------------------------------------------------------------------------------|
| Conventional Deadlift   | 4 × 6       | 150–155kg | Heavy work. 2 min rest. Drive floor away. Your 175×8 base means 155×6 is sustainable. |
| Front Squat             | 4 × 6       | 110–120kg | Upright torso. Deep as possible. Quad + mobility simultaneously.                      |
| Deficit Deadlift (+5cm) | 3 × 5       | 130kg     | Increases ROM. Strengthens bottom position.                                           |

## ► NORDIC + ATG BLOCK

|                          |            |                                                                                              |
|--------------------------|------------|----------------------------------------------------------------------------------------------|
| Nordic Curl — Eccentric  | 4 × 5–6    | 5–6s descent. Push back up. At your strength, expect 3+ self-assisted concentrics by week 3. |
| Loaded ATG Split Squat   | 4 × 8/side | 15kg DBs. +2.5kg weekly. Full depth. Non-negotiable knee protection.                         |
| Pistol Squat Progression | 3 × 5/leg  | Wk 1–2: to box. Wk 3–4: half pistol.                                                         |

## ► JUJIMUFU FLEXIBILITY FINISHER

|                             |                                     |                                                                                  |
|-----------------------------|-------------------------------------|----------------------------------------------------------------------------------|
| Front Split PNF Loaded      | 3 × (10s contract + 30s relax)/side | Push heel into ground (contract) 10s → release, sink 30s. Add 10kg plate on lap. |
| Middle Split Loaded Pancake | 3 × 45s                             | 20–30kg BB on back. Lean forward. Load pulls you deeper.                         |
| Jefferson Curl              | 3 × 8 @ 20kg                        | Full spinal flexion under load. Stand on plate for extra ROM.                    |
| Couch Stretch (KOT 8)       | 60s/side                            | Every lower day. Shin to wall goal.                                              |

## ▶ SPRINT DEVELOPMENT (90S REST – BUILDS RECOVERY)

|                          |         |                                                             |
|--------------------------|---------|-------------------------------------------------------------|
| Dynamic Warm-Up          | 10 min  | A-skips, B-skips, high knees, lateral shuffles              |
| Hill Sprints OR 30m Flat | 8 × 30m | FULL effort. 90s rest (not 3 min). Sprint-recovery stamina. |
| Box Jumps (Max Height)   | 4 × 5   | Step off. Full reset. Explosive triple extension.           |
| Broad Jump               | 4 × 4   | Stick landing. Max horizontal power.                        |

## ▶ CORE POWER BLOCK – SATURDAY (8 MIN)

| EXERCISE                       | SETS × REPS | NOTES                                                                                |
|--------------------------------|-------------|--------------------------------------------------------------------------------------|
| Dragon Flag                    | 3 × 6–8     | Full body lever off bench. 3s eccentric. Transfers directly to front lever strength. |
| Weighted Plank (plate on back) | 3 × 45s     | 20kg plate. Anti-extension under load. Brace like a 200kg squat.                     |
| L-Sit Hold (parallettes)       | 3 × 20–30s  | Both legs parallel to floor. Straight arms. Overlap with KOT Step 7 progression.     |
| Cable Woodchop (High to Low)   | 3 × 10/side | Rotational power. Athletic core for sprinting and throwing.                          |

## ▶ ATHLETIC CONDITIONING – 5 ROUNDS (60S REST ONLY)

|                     |          |                                                           |
|---------------------|----------|-----------------------------------------------------------|
| KB Clean + Press    | 5/arm    | No rest between arms. Full hip drive.                     |
| Burpee Pull-ups     | 8 reps   | Full burpee → jump to bar → pull-up.                      |
| Farmer's Walk       | 40m      | 40kg+ per hand. Grip + core challenge.                    |
| Battle Ropes        | 30s max  | Stay low in squat position.                               |
| Rest between rounds | 60s ONLY | Where stamina is BUILT. Powerful movements, minimal rest. |

Option A: DDP Yoga active recovery (if feeling fresh) · Option B: FULL REST — zero training (if fatigued)

⚠️ **THE HONEST TRUTH:** At 83kg handling 175kg+ raw across 6 intense days — a FULL rest day is not laziness, it's INTELLIGENCE. Choose below based on how you feel Sunday morning:

### OPTION A (ACTIVE RECOVERY) IF:

|                      |                        |
|----------------------|------------------------|
| Slept 8+ hours       | <b>Rested</b>          |
| No lingering DOMS    | <b>Recovered</b>       |
| Motivation is high   | <b>CNS fresh</b>       |
| Resting HR is normal | <b>Not overtrained</b> |
| NOT a PR week        | <b>Low CNS debt</b>    |

### OPTION B (FULL REST) IF:

|                           |                            |
|---------------------------|----------------------------|
| Slept under 7 hours       | <b>Rest needed</b>         |
| Still sore from Fri/Sat   | <b>Incomplete repair</b>   |
| Low energy / brain fog    | <b>CNS fatigued</b>        |
| Hit PRs this week         | <b>Nervous system debt</b> |
| Work/life stress was high | <b>Total load matters</b>  |

#### ► OPTION A — DDP YOGA LIGHT RECOVERY (30-40 MIN, HR STAYS UNDER 100BPM)

|                                  |         |                                                                               |
|----------------------------------|---------|-------------------------------------------------------------------------------|
| Standing Series (Diamond Cutter) | 10 min  | Warrior flow. Dynamic tension. ZERO intensity. This is RECOVERY not training. |
| Floor Series (Pigeon + Fold)     | 10 min  | Pigeon 90s/side. Seated fold. Gentle hip opening.                             |
| Deep Squat Sit + Easy Hanging    | 5+5 min | Mobility maintenance only. No effort.                                         |
| 4-7-8 Breathing                  | 5 min   | Parasympathetic activation. Actual recovery hormone trigger.                  |

#### ► OPTION B — FULL REST (DO NOTHING TRAINING-RELATED)

|                                                    |                    |                                                                          |
|----------------------------------------------------|--------------------|--------------------------------------------------------------------------|
| <b>No gym. No yoga. No "just a quick stretch."</b> | All day            | Your muscles grow DURING REST, not during training. Respect the biology. |
| Sleep in / Nap if needed                           | 8-10 hours         | Growth hormone peaks during deep sleep. This builds you.                 |
| Easy walk (optional)                               | 20-30 min          | Gentle stroll only. NOT cardio. Blood flow without CNS demand.           |
| Eat full nutrition                                 | Don't cut calories | Muscles are REPAIRING today. 150g protein. Full carbs.                   |

| WEEK                 | RECOMMENDATION               | REASON                                      |
|----------------------|------------------------------|---------------------------------------------|
| Week 1-2             | <div>●</div> FULL REST       | Body adapting to new volume. Don't push.    |
| Week 3               | <div>✓</div> Active Recovery | If adapting well, light movement helps.     |
| Week 4 (Deload)      | <div>✓</div> Active Recovery | Deload – body isn't stressed. Yoga fine.    |
| Week 5-6             | <div>●</div> FULL REST       | Phase 2 intensity ramps up. Conserve.       |
| Week 7               | <div>✓</div> Active Recovery | If no red flags.                            |
| Week 8 (Deload)      | <div>✓</div> Active Recovery | Deload – light yoga is fine.                |
| Week 9-11 (PR weeks) | <div>●</div> FULL REST       | MAX EFFORT phase. Full CNS recovery needed. |
| Week 12              | Auto-regulate                | You know your body by now.                  |

**Bottom Line:** Ronnie Coleman rested. Dorian Yates rested. Every elite athlete rests. Your effective training schedule is **5-6 days** depending on fatigue. Sunday OFF is not weakness – it's when the 175kg becomes 200kg.

WEEKS 5 – 8

# POWER DOMINANCE

Contrast training on all compound days. Coleman volume increases. Jujimufu targets: near-full front split. Medrano skills: front lever straddle, weighted muscle-ups. KOT heavily loaded. Sprint times tracked.

CONTRAST METHOD (PAP)

COLEMAN 6×10

KOT +20-25KG

JUJI: 10CM FROM FLOOR

MEDRANO HOLDS 20S

PHASE 2 LOADS

- Compounds

82-90% 1RM
- Volume Sets

75-80% × 8-10
- Calisthenics

BW + 25-35kg
- Nordic Curl

●

Full eccentric + concentric

## PHASE 2 UPGRADES

- Every compound: contrast pair

Heavy → Explosive
- Squat volume: 5×10 → 2×15

Endurance peak
- Juji stretch load: +50%

30-45kg
- DDP: add "Black Out" series

Sunday
- Sprint: track times weekly

Progress visible
- Deload Week 8

50% vol, 70% load

► CONTRAST TRAINING (POST-ACTIVATION POTENTIATION)

| HEAVY (A1)                      | EXPLOSIVE (A2)           | SETS | PROTOCOL                                                       |
|---------------------------------|--------------------------|------|----------------------------------------------------------------|
| Incline Press: 5×5 @ 85–90kg    | Plyo Push-up (clap): 5×5 | 5    | 30s between. 90s between pairs. Heavy primes fibers for speed. |
| Weighted Pull-up: 5×5 @ BW+30kg | Explosive Pull-up: 5×5   | 5    | BW feels light after heavy. EXPLODE through bar.               |
| Weighted Dip: 4×6 @ BW+25kg     | Med Ball Chest Pass: 4×8 | 4    | Transfer pressing power to velocity.                           |

► MEDRANO PHASE 2 SKILLS

|                                   |            |                                                           |
|-----------------------------------|------------|-----------------------------------------------------------|
| Front Lever (Adv Tuck → Straddle) | 5 × 12–20s | Progress to straddle by week 7. Straight arms throughout. |
| Weighted Muscle-Up (+10kg)        | 4 × 3      | Clean transition. No kip. Pure strength.                  |
| Back Lever (Tuck → Straddle)      | 4 × 15s    | Bulletproof shoulders for heavy pressing.                 |
| Handstand Push-up (Deficit)       | 4 × 5–8    | Hands on parallettes. Head below hand level.              |
| Human Flag (Tuck)                 | 3 × 10s    | Engage obliques + lats. Build toward one-leg.             |

► COLEMAN BACK FINISHER

|                     |                |                                       |
|---------------------|----------------|---------------------------------------|
| Barbell Row         | 4 × 10 @ 110kg | Volume. 90s rest. "Yeah buddy!"       |
| Lat Pulldown (Wide) | 3 × 12         | Squeeze, 2s pause at chest. 60s rest. |

## ▶ CONTRAST LOWER POWER

| HEAVY (A1)                  | EXPLOSIVE (A2)    | SETS | NOTES                                   |
|-----------------------------|-------------------|------|-----------------------------------------|
| Back Squat: 4×4 @ 155–160kg | Max Box Jump: 4×3 | 4    | 30s between. Step off box. 2 min pairs. |
| Trap Bar DL: 4×4 @ 160kg    | Broad Jump: 4×4   | 4    | Horizontal power after heavy pull.      |

## ▶ COLEMAN ENDURANCE SET (THE HARDEST SET OF THE WEEK)

|            |                    |                                                                                                                                    |
|------------|--------------------|------------------------------------------------------------------------------------------------------------------------------------|
| Back Squat | 2 × 15 @ 120–130kg | "Lightweight!" 120kg for 15 reps at 90s rest. Cardiovascular + muscular endurance at its peak. Breathe EVERY rep. Brace EVERY rep. |
|------------|--------------------|------------------------------------------------------------------------------------------------------------------------------------|

## ▶ KOT + NORDIC (LOADED)

|                        |                          |                                                                                |
|------------------------|--------------------------|--------------------------------------------------------------------------------|
| Loaded ATG Split Squat | 4 × 8/side @ 20–25kg DBs | Every week +2.5kg if form pristine.                                            |
| Nordic Curl Full ROM   | 4 × 6–8                  | Full eccentric + attempt concentric. Band assist if needed. Wk 6+: unassisted. |
| Single-Leg RDL         | 3 × 10/leg @ 20kg        | Balance + hamstring.                                                           |

## ▶ JUJIMUFU DEEP FLEX (LOADED, POST-TRAINING)

|                           |                      |                                                             |
|---------------------------|----------------------|-------------------------------------------------------------|
| Front Split PNF + 10kg    | 3 × (10s + 45s)/side | Contract → release → sink. Target: 10cm from floor by wk 8. |
| Middle Split Loaded Slide | 3 × 45s              | Sliders + 15kg plate on lap. Gravity pulls deeper.          |
| Loaded Pancake (30–40kg)  | 3 × 45s              | Chest toward floor.                                         |
| Jefferson Curl (25kg)     | 3 × 8                | Full vertebral flexion.                                     |

## ▶ SPRINT + OLYMPIC POWER

|                     |                    |                                                                        |
|---------------------|--------------------|------------------------------------------------------------------------|
| 40m Sprints (timed) | 6 × 40m @ 90s rest | FULL effort. Track time weekly. Improvement = stamina + power growing. |
| Hang Power Clean    | 5 × 3 @ 70–80kg    | Explosive hip extension. Olympic athleticism.                          |
| Push Press          | 4 × 5 @ 70kg       | Leg drive into lockout. Power chain.                                   |

## ▶ STAMINA CIRCUIT — 6 ROUNDS (60S REST)

|                      |                       |                          |
|----------------------|-----------------------|--------------------------|
| KB Swing (32kg) × 15 | Burpee Box Jump × 8   | Thrusters (40kg) × 10    |
| Pull-ups × 10        | Assault Bike × 15 cal | Rest: 60s between rounds |

**6 rounds at 60s rest = elite conditioning territory.** If you complete all 6 under 25 min, your stamina has already eclipsed 95% of gym-goers.

WEEKS 9–12

## APEX UNLOCKING

1RM testing. Full conjugate method. Front lever mastery. Front split flat. Nordic unassisted. 200kg squat/deadlift. You emerge as a complete hybrid athlete — strong, flexible, mobile, with stamina that outlasts anyone.

1RM TESTING (WK 10–11)

DYNAMIC EFFORT SPEED

FRONT LEVER FULL 15S

PHASE 3 LOADS

|                  |                        |                       |
|------------------|------------------------|-----------------------|
| Max Effort Day   | <div><div></div></div> | 95–100% (PR)          |
| Dynamic Effort   | <div><div></div></div> | 55–65% (speed)        |
| Volume Back-offs | <div><div></div></div> | 80–85% × 8–10         |
| Calisthenics     | <div><div></div></div> | BW+40kg / Full skills |

PHASE 3 PEAK TARGETS

|                      |                 |
|----------------------|-----------------|
| Squat 1RM (Wk 10)    | 200kg+ raw      |
| Deadlift 1RM (Wk 11) | 200–210kg raw   |
| Incline Press 5RM    | 115–120kg       |
| Front Lever          | 15s full layout |
| Front Split          | Flat on floor   |
| 7-Round Circuit      | Under 35 min    |

01

MONDAY – MAX EFFORT UPPER + CALISTHENICS PEAK

Incline 1RM (Wk 10) · Back-off volume · Full front lever · Weighted muscle-ups · Human flag

MAX EFFORT PRESS – PR PROTOCOL

|                                    |                                        |                                                                                |
|------------------------------------|----------------------------------------|--------------------------------------------------------------------------------|
| Incline Press → 1RM                | 60%×5→70%×3→80%×2→85%×1→90%×1→95%×1→PR | Target: 115–120kg. After 9 weeks of Coleman volume + contrast, this is earned. |
| Back-off Coleman Volume            | 3 × 8 @ 85% of PR                      | Immediately after PR. Volume on top of peak. 90s rest.                         |
| Contrast: Dip+30kg → Med Ball Slam | 4 × 5 + 4 × 8                          | Full PAP expression.                                                           |

MEDRANO PHASE 3 – PEAK EXPRESSION

|                                  |            |                                                                          |
|----------------------------------|------------|--------------------------------------------------------------------------|
| Front Lever FULL LAYOUT          | 5 × 10–15s | Both legs extended. Body parallel. Straight arms. Top 0.1% of gym-goers. |
| Weighted Muscle-Up (+20kg)       | 4 × 3      | Clean transition. Ultimate pulling power.                                |
| Human Flag (One-Leg Extended)    | 4 × 8–10s  | Full oblique+lat engagement.                                             |
| One-Arm Push-up (Full)           | 3 × 5/side | Flat floor. Controlled.                                                  |
| Handstand Push-up (Deficit/Free) | 3 × 5      | Attempt 1 freestanding rep by Wk 12.                                     |

## ► MAX EFFORT (ALTERNATING WEEKS)

|                                 |                                     |                                                                                        |
|---------------------------------|-------------------------------------|----------------------------------------------------------------------------------------|
| Back Squat 1RM<br>(Week 10)     | Pyramid to PR. Target:<br>200kg+    | Your 175×8 base = ~220 est. 1RM. After volume adaptation, 200 single should be smooth. |
| Conv. Deadlift 1RM<br>(Week 11) | Pyramid to PR. Target:<br>200–210kg | Same logic. You WILL hit 200+ raw.                                                     |
| Volume Back-off                 | 2 × 12 @ 140kg (sq) /<br>150kg (DL) | Coleman: volume even on max day.                                                       |

## ► KOT PEAK + NORDIC MASTERY

|                                  |                        |                                                                  |
|----------------------------------|------------------------|------------------------------------------------------------------|
| Nordic Curl — Full<br>Unassisted | 4 × 8                  | Full eccentric + concentric. No band. Top 1% hamstring strength. |
| Loaded ATG Split Squat           | 4 × 8 @ 30–35kg<br>DBs | Heaviest ever. Perfect form or drop weight.                      |
| Pistol Squat (Loaded +10kg)      | 4 × 8/leg              | Full depth. Balance mastery.                                     |

## ► JUJIMUFU — FRONT SPLIT ACHIEVEMENT

|                              |                         |                                                                             |
|------------------------------|-------------------------|-----------------------------------------------------------------------------|
| Front Split PNF MAX          | 5 × (10s +<br>60s)/side | 20kg plate. 12 weeks culminates HERE. Hips touch floor. BREATHE through it. |
| Middle Split Progress        | 3 × 60s @ 25kg          | Target: 15–20cm from floor.                                                 |
| Loaded Pancake<br>(40kg)     | 3 × 60s                 | Chest toward floor. Peak adductor flexibility.                              |
| Jefferson Curl (30–<br>35kg) | 3 × 8                   | Peak posterior chain mobility.                                              |

**Jujimufu Promise:** A 100kg+ athlete doing full splits while squatting 200kg. Flexibility and strength are the same thing expressed differently.

03

## WEDNESDAY — DYNAMIC EFFORT + KOT + PEAK CONDITIONING

Speed work · Full loaded KOT · 7-round championship circuit

## ► DYNAMIC EFFORT — BAR SPEED FOCUS

|                   |                          |                                          |
|-------------------|--------------------------|------------------------------------------|
| Speed Squat (Box) | 10 × 3 @ 55–60% (~120kg) | 45s rest. MAX bar speed every rep.       |
| Speed Bench       | 10 × 3 @ 55–60% (~65kg)  | 45s rest. Launch the bar. Speed = power. |

## ► CHAMPIONSHIP CIRCUIT — 7 ROUNDS (45S REST)

|                               |                      |                      |
|-------------------------------|----------------------|----------------------|
| KB Swing (40kg) × 15          | Burpee Muscle-Up × 5 | Thrusters (50kg) × 8 |
| Farmer's Walk 50m (48kg/hand) | Assault Bike 20 cal  | Rest: 45s ONLY       |

7 rounds at 45s rest under 35 min = ELITE stamina. Your heart rate will hit 90%+ max. This is the final test of work capacity.

06

## SATURDAY — WEEK 12 FINAL ATHLETIC ASSESSMENT

Complete hybrid athlete scorecard testing

## ► FINAL ASSESSMENT TESTS (WEEK 12 ONLY)

| TEST                             | TARGET            | WHAT IT PROVES                             |
|----------------------------------|-------------------|--------------------------------------------|
| 100kg Squat Max Reps (2 min cap) | 20+ reps          | Stamina under load. Coleman volume payoff. |
| Max Strict Pull-ups              | 25+               | Upper body muscular endurance.             |
| 30m Sprint (timed)               | Sub 4.5s          | Speed + power development.                 |
| Front Lever Hold                 | 15s full layout   | Calisthenics mastery (Medrano standard).   |
| Front Split Depth                | 0 cm (flat)       | Flexibility mastery (Jujimufu standard).   |
| Deep Squat Sit                   | 10 min continuous | Mobility mastery (Ido Portal standard).    |
| Nordic Curl Full ROM             | 8 unassisted reps | Joint bulletproofing (KOT standard).       |

NUTRITION — PERFORMANCE FUELING

150G

PROTEIN DAILY

~1.8g/kg. Split across 4–5 meals. Non-negotiable for 6-day training at 83kg.

380G

CARBS (HEAVY DAY)

Mon/Tue/Fri/Sat. Fuel Coleman volume + conditioning. Rice, oats, potatoes.

250G

CARBS (LIGHT DAY)

Wed/Thu/Sun. Still active — needs fuel but less glycolytic demand.

75G

FATS DAILY

~0.9g/kg. Salmon, eggs, avocado, olive oil, nuts. Joint + hormone health.

~3200

CALORIES (HEAVY)

Training day total. Lean bulk territory at 83kg/5'9". Adjust ±200 based on scale trend.

~2700

CALORIES (LIGHT)

Light/recovery day. Maintain without excess. Protein stays constant.

15G

COLLAGEN DAILY

30 min pre-training + Vitamin C. Supports tendons for loaded stretching.

5G

CREATINE DAILY

Sprint recovery + power between sets. Take with post-workout meal.

**Flexibility Hack (Jujimufu):** 15g collagen + 50mg Vitamin C 30 min before flexibility sessions. Research shows 2× collagen synthesis in tendons/fascia. Faster flexibility gains + better joint health.

# WEEK 12 — COMPLETE HYBRID ATHLETE SCORECARD

THE FULL PICTURE OF WHAT YOU'VE BUILT ACROSS ALL 5 SYSTEMS

## STRENGTH (RAW)

|                   |             |
|-------------------|-------------|
| Squat 1RM         | 200kg+      |
| Deadlift 1RM      | 200–210kg   |
| Incline Press 5RM | 115–120kg   |
| Weighted Pull-up  | BW+40kg × 5 |
| Power Clean 3RM   | 90–100kg    |

## STAMINA

|                     |          |
|---------------------|----------|
| 100kg Squat (2 min) | 20+ reps |
| Max Pull-ups        | 25+      |
| 7-Round Circuit     | <35 min  |
| 30m Sprint          | Sub 4.5s |
| Recovery (HR→120)   | <60s     |

## FLEXIBILITY (JUJIMUFU)

|                |                   |
|----------------|-------------------|
| Front Split    | Flat on floor     |
| Middle Split   | 15–20cm           |
| Jefferson Curl | 30kg full ROM     |
| Loaded Pancake | 40kg chest→floor  |
| Squat Sit      | 10 min continuous |

## CALISTHENICS (MEDRANO)

|                  |           |
|------------------|-----------|
| Front Lever Full | 15s hold  |
| Weighted MU      | +20kg × 3 |
| Human Flag       | 10s       |
| One-Arm Push-up  | 5/side    |
| HSPU             | 8 reps    |

## MOBILITY (IDO PORTAL)

|              |                  |
|--------------|------------------|
| Dead Hang    | 2+ min           |
| Squat Sit    | 10 min easy      |
| Skin the Cat | 5 smooth reps    |
| German Hang  | 30s comfortable  |
| QDR Flow     | 5 min continuous |

## JOINT HEALTH (KOT)

|                 |                 |
|-----------------|-----------------|
| ATG Split Squat | 30–35kg × 8     |
| Nordic Curl     | 8 unassisted    |
| Pistol Squat    | +10kg × 8       |
| Couch Stretch   | Shin to wall    |
| Patrick Step    | Full ankle bend |

# RECOVERY SCIENCE — WILL YOU ACTUALLY RECOVER?

THE HONEST ANSWER: YES — BUT ONLY IF YOU FOLLOW THESE NON-NEGOTIABLE PROTOCOLS

**The Reality Check:** You're training 6 days/week with 175kg+ compounds, calisthenics skills, loaded stretching, AND conditioning. Without deliberate recovery management, you WILL burn out by Week 3. The program is designed with built-in recovery mechanisms — but you must execute them.

| Why This Program Works Despite Intensity |                             |
|------------------------------------------|-----------------------------|
| Never 2 heavy days back-to-back          | Mon upper / Tue lower       |
| Wednesday = Movement + Conditioning      | Active recovery for Mon/Tue |
| Thursday = Calisthenics + Hypertrophy    | Low spinal load             |
| Friday = Heavy lower again               | 72+ hrs after Tuesday       |
| Sunday = Full yoga recovery              | Parasympathetic reset       |
| Deload every 4th week                    | Mandatory supercompensation |
| 90s rest (not 30s) between heavy sets    | ATP partial recovery        |
| DDP Yoga = active recovery built-in      | Not passive rest            |

| Recovery Red Flags – Stop if you see these |                           |
|--------------------------------------------|---------------------------|
| Resting HR elevated 5+ bpm above normal    | Overreaching              |
| Lifts declining 2 weeks in a row           | Take extra rest day       |
| Joint pain (NOT muscle soreness)           | Skip that movement        |
| Sleep quality dropping                     | Reduce volume 30%         |
| Mood/motivation crashed                    | CNS fatigue – deload NOW  |
| Can't complete warm-up sets properly       | Go home. Rest.            |
| DOMS lasting 4+ days                       | Too much volume           |
| Appetite vanished                          | Cortisol spike – back off |

## The 5 Recovery Pillars (All Mandatory)

| Pillar 1: Sleep (The #1 Recovery Tool)   |                            |
|------------------------------------------|----------------------------|
| Minimum sleep                            | 7.5–9 hours                |
| Sleep schedule consistency               | ±30 min daily              |
| Room temperature                         | 18–20°C                    |
| No screens 60 min before bed             | Blue light = cortisol      |
| Magnesium glycinate before bed           | 400mg                      |
| Growth Hormone release during deep sleep | This is when muscle BUILDS |

| Pillar 2: Nutrition Timing      |                             |
|---------------------------------|-----------------------------|
| Post-workout protein            | 40–50g within 30 min        |
| Post-workout carbs              | 60–80g fast carbs           |
| Pre-sleep casein/cottage cheese | 30g slow protein            |
| Total daily protein             | 1.6g/lb (split 4–5 meals)   |
| Hydration                       | 3.5–4L water daily min      |
| Collagen 30 min pre-training    | 15g + Vit C (tendon repair) |

PILLAR 3: ACTIVE RECOVERY

|                              |                        |
|------------------------------|------------------------|
| Sunday DDP Yoga              | 40 min (mandatory)     |
| Daily walking                | 8000+ steps            |
| Foam rolling post-session    | 5 min major groups     |
| Cold shower (last 60s)       | Inflammation control   |
| Contrast shower (heavy days) | 30s cold / 60s hot × 3 |

PILLAR 4: STRESS MANAGEMENT

|                                       |                         |
|---------------------------------------|-------------------------|
| 4-7-8 Breathing daily                 | 5 min (cortisol down)   |
| Training stress + life stress = TOTAL | Account for both        |
| High work stress week?                | Drop 1 conditioning set |
| Caffeine cutoff                       | 2 PM latest             |
| Sunlight first 30 min of day          | Circadian rhythm        |

PILLAR 5: PERIODIZATION

|                                      |                         |
|--------------------------------------|-------------------------|
| Week 4: MANDATORY deload             | Supercompensation       |
| Week 8: MANDATORY deload             | Peak adaptation         |
| Never max effort 2 days in a row     | CNS needs 48-72hrs      |
| Listen to RPE — if 9+ too often      | Back off 10%            |
| Auto-regulate: bad day = reduce load | Not every day is PR day |

The Science of Why This Works:

Muscle Protein Synthesis (MPS) peaks 24-48 hours post-training and returns to baseline by 72 hours. Your schedule ensures:

- Upper body (Mon) → 72+ hours before next upper (Thu) ✓
- Heavy lower (Tue) → 72+ hours before next heavy lower (Fri) ✓
- Wed/Sun are LOW spinal-load days → spine recovers from squat/deadlift ✓
- Loaded stretching (Jujimufu) INCREASES recovery by promoting blood flow to trained muscles ✓
- DDP Yoga (Sun) activates parasympathetic system → accelerates systemic recovery ✓

Key insight: The conditioning and mobility work on Wed/Sun are NOT additional STRESS — they are RECOVERY ACCELERATORS. Low-intensity movement pushes blood into damaged tissue faster than sitting on a couch. This is why active athletes recover faster than sedentary people.

Supplementation for Recovery at This Intensity:

- Creatine: 5g daily (ATP regeneration between sets)
- Collagen: 15g + 50mg Vitamin C pre-training (tendon/fascia repair)
- Magnesium Glycinate: 400mg before bed (muscle relaxation + sleep quality)
- Omega-3: 3g EPA/DHA daily (systemic inflammation control)
- Zinc: 30mg daily (testosterone + immune support)
- Vitamin D3: 4000 IU daily (muscle function + recovery hormones)
- Optional: Tart Cherry Juice 250ml post-training (reduces DOMS by 25% per research)

THE AUTO-REGULATION RULE: If you feel beaten up by Week 2-3, DO NOT power through. Use this adjustment ladder:

1. First: Reduce conditioning rounds by 50% (Wed + Sat)
2. Second: Drop volume sets (remove the 2x15 squat endurance set)
3. Third: Make Thursday a full DDP Yoga day instead of training
4. Fourth: If still fatigued → take an unplanned deload (3-4 days at 50%)

The program assumes you're eating 3500+ calories, sleeping 8+ hours, and managing life stress. If ANY of those are compromised, reduce training load FIRST.

# PROGRESSION & DELOAD RULES

WHEN TO PUSH, WHEN TO BACK OFF

## PROGRESSION RULES

|                             |                        |
|-----------------------------|------------------------|
| Hit all reps all sets?      | +2.5–5kg next week     |
| Volume set felt easy?       | +5kg immediately       |
| Calisthenics hold exceeded? | Next progression level |
| Deeper than last week?      | +2.5kg stretch load    |
| Sprint improved?            | Add distance (40m→50m) |
| RPE below 7?                | Increase load now      |
| Joint pain?                 | STOP. Rest. Reassess.  |

## DELOAD PROTOCOL (WK 4, 8)

|                  |                     |
|------------------|---------------------|
| Strength volume  | –50%                |
| Strength load    | –30–40%             |
| KOT Protocol     | NEVER deloads       |
| Flexibility time | INCREASE 50%        |
| DDP Yoga         | Add 2nd session     |
| Conditioning     | 3 rounds max        |
| Calisthenics     | Skill only, no load |

**Golden Rule:** Deload weeks = flexibility acceleration. Body recovers from load stress → push DEEPER into stretches, LONGER holds, FURTHER movement patterns. Strength deloads. Flexibility never does.

| Box Jump – Safe Landing Technique       | <a href="#">youtube.com – Box Jump Form</a>     |

🚩 **Pro Tip:** Watch each video BEFORE attempting the exercise for the first time. For heavy compounds (squat, deadlift) at your level (175kg+), record yourself from the side and compare to the reference videos. Small form breakdowns at heavy loads = injury risk. Film every PR attempt.
